

**Oil** - is the most demanded energy resource. With the growth of the population of the Earth, the consumption of petroleum products is growing. By 2020, global oil consumption will reach 115 million barrels per day. More than 55% of the investments of Russian companies go to the oil and gas industry.

**Nine** large oil companies produce 90% of all oil in Russia. In addition, there are 150 small and medium oil production enterprises.

**Large** companies do not reduce the price of oil. They have a tough pricing policy. This creates high thresholds for investors. Therefore, many investors are now interested in small companies to buy oil and enter the market..

### SITUATION IN THE OIL MARKET

**Sanctions - outflow of foreign capital from Russia.**

Sanctions slow down the development of shale deposits. It is forbidden to supply the equipment necessary for hydraulic fracturing in the production.

**Investments in crude refining have declined.**

A year ago - 250 billion rubles. Today - 150 billion rubles. Asian financial markets do not invest in Russian oil production. Russian domestic investments are too small, and they are not enough to support the market. The government funds only strategic projects.

**Under the Russian Federal Law, there are strict rules for the foreign investo.**

In Russia, the inflow of foreign investment to the national strategic pillars is limited. It requires the approval of the Prime Minister of the Russian Federation.
